

Read Me File:

Run the code using the following command

- `g++ a_star_search.cpp`

Now run `./a.out 3 5 [0/1]`

here 3 > number of stacks

5 > Number of blocks

[0/1] > 0 => no debug information

1 => debug information

eg :

`g++ a_star_search.cpp`

`./a.out 3 5 0`

This will run for both heuristic. First search result would be the implemented heuristic.

Second search result would be standard heuristic result. It waits till 25000 iterations to stop.
